# Homework 5

Code **▼** 

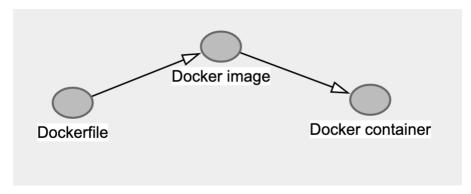

#### Scott Sun

- Part 1:
  - o Q1
  - o Q2
  - Q3
  - Q4
  - Q5
  - Q6
  - Q7
  - 。 Q8
- Part 2
  - o (1)
- (2)Part 3
  - o Q9
  - o Q10

### Part 1:

### Q1

- Docker container: an object instance of a Docker image
- Docker image: the template (analogous to class in the context of programming) for creating the realization,
   Docker container
- Dockerfile: the blueprint to build Docker image

#### 02

jupyter/pyspark-notebook has a size of 4.04GB.

#### Q3

The following command binds port 8888 in the container to port 823 on the host machine.

Hide

docker run -p 823:8888 jupyter/pyspark-notebook

The url used to connect the JupyterLab is:

http://127.0.0.1:823/lab?token=b845fac44c27006664b1919e20d36514c131cce8a85088fc (http://127.0.0.1:823/lab?token=b845fac44c27006664b1919e20d36514c131cce8a85088fc)

5/3/24, 1:53 PM Homework 5

Q4

The code return 0.977408

# Q5

docker ps does not return any container in the output table. docker ps –a return all the containers. The difference is due to the fact that docker ps by default only show containers that are running and –a displays all the containers.

#### Q6

The file saved before does not exist because by running the image we instantiate a completely new container. The file saved previously is saved in the first container.

#### Q7

The CONTAINER ID of the original container is fb67bf8dbae4, so we run the following command.

Hide

docker start fb67bf8dbae4

Then, we use the following command to get the token of the JupyterLab, which is: 3f5232de749dc4fcb90b5241083308c5dbc067edfde492ad

Hide

docker exec fb67bf8dbae4 jupyter server list

Finally, we use the url with the updated token to launch JupyterLab and access our original file: http://127.0.0.1:823/lab?token=3f5232de749dc4fcb90b5241083308c5dbc067edfde492ad (http://127.0.0.1:823/lab?token=3f5232de749dc4fcb90b5241083308c5dbc067edfde492ad)

#### Q8

Assuming the target directory on the local machine is /usr/jupyter/pyspark, we copy the files from the container using the following command.

Hide

docker cp fb67bf8dbae4:/home/jovyan/work/hw5\_example.ipynb /usr/jupyter/pyspark

## Part 2

(1)

After cd to the directory flask, use the following commands to build the image and instantiate an container based on the image.

Hide

```
docker image build -t flask-hw-example .
docker run -p 8000:8000 --name p2-1 flask-hw-example
```

The link to Flask web-app is: localhost:8000

5/3/24, 1:53 PM Homework 5

After cd to the directory dockerfile2, use the following commands to build the image and instantiate an container based on the image.

```
Hide
```

```
docker image build -t py-r-hw-example .
docker run --name p2-2 py-r-hw-example
```

### Part 3

#### Q9

First, we build the image based on the Dockerfile. After we log into Docker Hub, we need to re-tag the image with the username at the front (i.e., scotsun/<image-name>) and finally push as a repo.

```
Hide
```

```
docker image build -t py-r-hw-example .
docker login
docker tag py-r-hw-example:latest scotsun/py-r-hw-example:1.0
docker push scotsun/py-r-hw-example:1.0
```

The link to the image is: https://hub.docker.com/repository/docker/scotsun/py-r-hw-example (https://hub.docker.com/repository/docker/scotsun/py-r-hw-example)

# Q10

Hide

singularity pull docker://scotsun/py-r-hw-example:1.0

```
[ms1008@dcc-login-02 ~/bios823_hw5_part3 $ ls -l
total 4616616
-rwxr-xr-x. 1 ms1008 dukeusers 4125341413 Nov 15 17:15 py-r-hw-example_1.0.sif
         -. 1 ms1008 dukeusers
                                       81 Nov 12 19:12 requirements.R
      -r-
      -r--. 1 ms1008 dukeusers
                                       23 Nov 12 19:11 requirements.txt
-rw-r--r--. 1 ms1008 dukeusers
                                      439 Nov 12 19:11 test.R
-rw-r--r-. 1 ms1008 dukeusers
                                     1618 Nov 12 19:11 test.py
```

The SIF container file has a size of 4GB. It has been uploaded to Sylabs as a signed repo. Here is the link: https://cloud.sylabs.io/library/scotsun/bios823/py-r-hw-example.sif (https://cloud.sylabs.io/library/scotsun/bios823/py-r-hw-example.sif)
